

Tanner Wash Bridges:
 The 1926 Tanner Wash Bridge
 (green/red) was reconstructed in 2007.
 Only the original piers were kept.

The WB I-40 bridge was replaced in
 2010; the EB bridge in 2016, suggesting
 that the existing WB bridge (orange)
 may have been the older of the two.

Alignments on this Map

Green/Red: Original and first paved route.

Orange: 1950s 2-lane replacement to the green/red alignment,
 entering the right side of the map on the path of future eastbound
 I-40 and then transitioning to the path of westbound I-40 near the
 middle of the map.

Note:
 It is possible that the
 orange route did not
 precisely follow the path
 of EB I-40 entering this
 map from the east.
