

Between the Oklahoma State Line (east)
and Alanreed (west)

Note:
Because the roadways here are so physically close to one another, slight separation was added in places to improve clarity. The alignments remain accurately depicted.

Alignments on this Map

Green/Red: Original and first paved route.

Orange: Lanes added in the early 1950s to create a 4-lane highway, later adopted by EB I-40 on the top and middle portions of the map, and by WB I-40 westward from Exit 146 on the bottom portion.

Note:
The dashed lines below represent the point where the green/red route transitioned from the path of the frontage road to the path of EB I-40. Likewise, the orange route transitioned to WB I-40.
