Document Above:  
This road life study includes three bridges built by the county in 1925. Bridge #1 matches the location of the Deep Fork crossing discussed at the bottom of the map. The others are Coffee Creek (#2) and Soldier Creek (#3). Also listed is the type of work (grading and draining "Gr Dr," and "3 bridges"). Other highlights describe additional grading and draining and paving of the roadway with Rock Asphalt on PC Concrete in 1929. The dates of the bridges establish that the green/red route here was in place in 1925.

Above: 1928 project plans for FAP 137-F call for replacement of an existing culvert (arrow below), further establishing this alignment as already in use at the time.

Note:  
Vintage aerial photos reveal a bridge here on the pre-US 66 roadway. Its location fits Bridge #1 on the road life study at the top of the map), even though the traveled route was moved from the 2nd St. alignment during the year it was built. Bridge #3 (Soldier Creek) was built with 1921-1922 federal funds, and it is likely the other two were as well. If so, the funding for Bridge #1 may have required its construction, even though the main route was relocating.
