

Between Seligman (east) and Peach Springs (west)

Note:  
Culverts for the first paved route (red) from the Crookton Road exit in the east (Map 54) to Kingman in the west (Map 72) were built between 1930-1936. All of the drainage structures on this map are culverts.

Note on Alignments:  
The green route followed the path of the former National Old Trails Road. The first paved route (red) was realigned (orange) in this area in the 1950s.

Note:  
The three stone and tinhorn culverts on the green route were originally built for the National Old Trails Road.

Built for the National Old Trails Road, this culvert was adopted by US 66 (green route) in 1926.
