

Example of a typical box culvert marking the original alignment north of the RR.

Between Grants (east)
and Iyanbito (west)

Note on Alignments:

The original route prior to paving continues on the north side of the RR. The 1937 first paved route (red) enters the map on the right aligned with the frontage road for I-40. West of Exit 47, it was consumed by the westbound lanes of the interstate, which was in place here in 1961.

All drainage structures on this map are culverts.
